Cancer Survivor? Crucea-SGS for CANCER -revised from Dr. Jacob Schor

October is Breast Cancer Awareness month and Thorne Research, the vendor from whom we purchase Crucera, has put it on sale. We would like to pass our savings on to you.

Actually Thorne isn’t just putting Crucera on sale, they have also promised to make a donation for each bottle sold to either the Triple Negative Breast Cancer Association or to the Oncology Association of Naturopathic Physicians.

Crucera is Thorne’s name for Sulforaphane glucosinolate SGS™. This is the broccoli sprout extract made under the patent owned by Johns Hopkins University. The research on sulforaphane's usefulness in cancer is expanding rapidly.

Here’s the quick way to sum up what the scientists are saying about sulforaphane. Go to www.PubMed.gov. As of this morning a search of published research papers in the US National Library of Medicine yields 812 citations about sulforaphane. Of these 444 are related to sulforaphane’s action against cancer. 217 of these look at sulforaphane’s action in triggering “apoptosis” of the cancer cells; “apoptosis” is commonly translated as, ‘cellular suicide.’ Almost two-dozen of these papers look at the effect on cancer stem cells.

Looking instead at www.ClinicalTrials.gov tells us that there are currently 19 clinical trials using sulforaphane in process.

Bottom line, sulforaphane is an exciting and potentially valuable therapeutic option to both prevent initial cancer and reduce risk of recurrence. If you are a cancer survivor, you just might be seeing this exciting new substance on your treatment plan if we deem it appropriate for you.

Sale details:
We normally sell Thorne Research’s Crucera capsules for $57.00 a bottle. Until the end of the month, if you pre-order this product we will drop the cost by $10 and so sell it for $47.00/bottle. Order as many bottles as you want.
